

XX Identifying binding partner for synaptic vesicle protein 2 (SV2) for
PT treating epilepsy, Parkinson's disease, Alzheimer's disease, involves
PT determining binding partner which modulates binding of levetiracetam or
PT its analog to SV2 protein.
XX
XX Disclosure; SEQ ID NO 8; 63pp; English.
XX
CC The invention relates to a method of identifying a binding partner for
CC synaptic vesicle protein 2 (SV2), involves incubating SV2 protein with
CC levetiracetam and a potential binding partner and determining if the
CC potential binding partner modulates the binding of levetiracetam to the
CC SV2 protein or fragment, thus identifying a binding partner for the SV2
CC protein. The method is useful for identifying a binding partner for
CC synaptic vesicle protein 2 and the identified binding partner is useful
CC for treating epilepsy, epileptogenesis, seizure disorders, convulsions,
CC depression, anxiety, cerebral ischaemia, myotonia, stroke, Tourette's
CC syndrome, neonatal cerebral haemorrhage, Parkinson's disease, Alzheimer's
CC disease and dementia. The present sequence represents the amino acid
CC sequence of the human synaptic vesicle protein 2, SVOP.

XX Novel polynucleotides derived from Coryneform bacteria, for identifying
 PT mutation point of a gene, measuring expression of a gene, analyzing
 PT expression profile or pattern of a gene and identifying homologous gene.

XX Claim 17; SEQ ID NO 3935; 246pp + Sequence Listing; English.

XX The present invention provides a number of nucleotide and protein
 CC sequences from the Coryneform bacterium Corynebacterium glutamicum. These
 CC are useful for identifying the mutation point of a gene derived from a
 CC mutant of coryneform bacterium, measuring expression amount and analysing
 CC the expression profile or expression pattern of a gene derived from
 CC Coryneform bacterium, and identifying a homologue of a gene derived from
 CC Coryneform bacterium. Coryneform bacteria are useful for producing amino
 CC acids, nucleic acids, vitamins, saccharides and organic acids,
 CC particularly L-lysine. The present sequence is a protein described in the
 CC exemplification of the invention. Note: The sequence data for this patent
 CC did not form part of the printed specification, but was obtained in

CC electronic format directly from the European Patent Office

 microorganisms, e.g. nucleotides, lipids and especially lysine.

PT

PT Claim 1; Page; 20pp; German.

PS

XX This invention describes novel polynucleotides that encode membrane
 synthase and membrane transport proteins from Corynebacterium glutamicum.
 The polynucleotides are isolated from a nucleic acid library of C.
 glutamicum then mutated at the specified positions, cloned and expressed
 by standard methods. Cells, especially Corynebacterium glutamicum,
 containing vectors that express the polynucleotides are used for
 production of fine chemicals, preferably amino acids and specifically
 lysine, but more generally nucleotides, nucleosides, lipids, fatty acids,
 diols, carbohydrates, aromatic compounds, vitamins, co-factors and
 enzymes. These are useful in the food, animal feed, cosmetics and
 pharmaceutical industries. The polynucleotides, optionally as primers and
 probes, can also be used for identification and classification of C.
 glutamicum and related species, e.g. for diagnosis, for genomic mapping,
 functional or evolutionary studies, gene manipulation and modulation of
 metabolic activity. Cells that containing the polynucleotides of the
 invention may produce fine chemicals in better yields, with higher
 productivity and/or more efficiently. NOTE: This sequence is not
 represented in the printed specification but is available in electronic
 format. The sequence represented in this record has been obtained from
 WO2003040292.

XX Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide,
 useful as molecular targets for diagnostics, prophylaxis and treatment of
 pathological conditions resulting from bacterial infection.

PT

PT Disclosure; SEQ ID NO 24635; 455pp; English.

PS

XX The invention relates to Pseudomonas aeruginosa polypeptides and the
 polynucleotides encoding them. The sequences are useful in diagnosis and
 therapy of pathological conditions, as molecular targets for diagnostics,
 prophylaxis and treatment of pathological conditions resulting from a
 bacterial infection, for evaluating a compound, such as a polypeptide,
 for the ability to bind a P. aeruginosa nucleic acid, as components of
 effective antibacterial targets, as targets for antibacterial drugs,
 including anti-P. aeruginosa drugs, as templates for recombinant
 production of P. aeruginosa-derived peptides or polypeptides, as target
 components for diagnosis and/or treatment of P. aeruginosa-caused
 infection, and in detection of P. aeruginosa sequences or other sequences
 of Pseudomonas species using biochip technology. Sequences ABO67826-
 ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The
 sequence data for this patent did not form part of the printed
 specification but was obtained in electronic format from USPTO at
 seqdata.uspto.gov/sequence.html

XX
The present invention describes a predictor set comprising a plurality of
CC polynucleotides or polypeptides whose expression pattern is predictive of
CC the response of cells to treatment with a compound that modulates protein
CC tyrosine kinase activity or members of the protein tyrosine kinase
CC pathway. Also described: (1) predicting whether a compound is capable of
CC modulating the activity of cells, comprising obtaining a sample of cells,
CC determining whether the cells express a plurality of markers, and
CC correlating the expression of the markers to the compound's ability to
CC modulate the activity of the cells; (2) a plurality of cell lines for
CC identifying polynucleotides and polypeptides whose expression levels
CC correlate with compound sensitivity or resistance of cells associated
CC with a disease state; and (3) identifying polynucleotides and
CC polypeptides that predict compound sensitivity or resistance of cells
CC associated with a disease state, comprising subjecting the plurality of
CC cell lines to one or more compounds, analysing the expression pattern of
CC a microarray of polynucleotides or polypeptides, and selecting
CC polynucleotides or polypeptides that predict the sensitivity or
CC resistance of cells associated with a disease state by using the
CC expression pattern of the microarray. The polynucleotides and
CC polypeptides have cytostatic activities, and can be used in gene therapy.
CC The polynucleotides and polypeptides are useful in predicting the
CC activity of compounds that interact with protein tyrosine kinases and/or
CC protein tyrosine kinase pathways. These may be used in determining drug
CC sensitivity in patients to allow the development of individualized
CC genetic profiles which aid in treating diseases and disorders (e.g.
CC cancer) based on patient response at a molecular level. The present
CC sequence is used in the exemplification of the present invention.

XX
XX  Novel polynucleotides derived from Coryneform bacteria, for identifying
PT  mutation point of a gene, measuring expression of a gene, analyzing
PT  expression profile or pattern of a gene and identifying homologous gene.
XX
XX  Claim 17; SEQ ID NO 6914; 246bp + Sequence Listing; English.
XX
XX  The present invention provides a number of nucleotide and protein
CC  sequences from the Coryneform bacterium Corynebacterium glutamicum. These
CC  are useful for identifying the mutation point of a gene derived from a
CC  mutant of coryneform bacterium, measuring expression amount and analysing
CC  the expression profile or expression pattern of a gene derived from
CC  Coryneform bacterium, and identifying a homologue of a gene derived from
CC  coryneform bacterium. Coryneform bacteria are useful for producing amino
CC  acids, nucleic acids, vitamins, saccharides and organic acids,
CC  particularly L-lysine. The present sequence is a protein described in the
CC  exemplification of the invention. Note: The sequence data for this patent
CC  did not form part of the printed specification, but was obtained in
XX  electronic format directly from the European Patent Office

XX New mammalian DNA sequences encoding transmembrane, receptor or secreted
PT PRO polypeptides, useful for screening of potential peptide or small
PT molecule inhibitors of the relevant receptor/ligand interactions.
XX Claim 12; Fig 60; 773pp; English.
XX AAA37022 to AAA37144 encode the new isolated human transmembrane,
CC receptor or secreted PRO polypeptides given in AA99340 to AA99462. The
CC transmembrane and receptor PRO proteins can be used for screening of
CC potential peptide or small molecule inhibitors of the relevant
CC receptor/ligand interactions. The polypeptides and nucleotide sequences
CC encoding them have various industrial applications, including uses as
CC pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR
CC primers and hybridisation probes used in the isolation of the PRO
CC polypeptides from the present invention

PS

XX The present invention relates to secreted and transmembrane proteins.
CC These proteins and the DNA encoding them may be used as hybridization
CC probes, in chromosome and gene mapping and in the generation of anti-
CC sense RNA and DNA. They may also be used to generate either for
CC transgenic animals or knockout animals which are in turn useful for
CC development and screening of therapeutically useful reagents. The nucleic
CC acids may also be used in gene therapy

XX
XX Novel nucleic acids encoding PRO polypeptides, used to diagnose the
PT presence of tumors, such as prostate and breast tumors, in mammals and to
PT screen for modulators of the compounds.
PT
XX Claim 11; Fig 266; 774pp; English.
XX
XX Sequences AAU29024-AAU29328 represent PRO polypeptides of the invention.
CC The PRO polypeptides and their associated nucleic acids can be used to
CC detect the presence of a tumour in a mammal by comparing the level of
CC expression of a PRO polypeptide in a test sample of cells from the animal
CC and a control sample of normal cells, whereby a higher level of
CC expression in the test sample indicates the presence of a tumour in the
CC mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats
CC and rabbits but are preferably human. The polypeptides can be used to
CC stimulate tumour necrosis factor (TNF) alpha release from human blood,
CC when contacted with it. A specific polypeptide can be used to stimulate
CC the proliferation or differentiation of chondrocyte cells. The PRO
CC proteins can be used to determine the presence of tumours and also
CC susceptibility to tumour development, particularly adrenal, lung, colon,
CC breast, prostate, rectal, cervical, or liver tumours, in mammalian
CC subjects. The oligonucleotide probes specific for the PRO nucleic acids
CC can be used for genetic analysis of individuals with genetic disorders

PT Three hundred and five nucleic acids encoding PRO polypeptides, useful
 PT for the manufacture of a medicament for diagnosing or treating tumor.

PS Claim 11; Fig 266; 707pp; English.

XX The invention relates to human PRO polypeptides (secreted and
 CC transmembrane polypeptides) and the PRO polynucleotides encoding them.
 CC The invention also relates to a method for stimulating the release of
 CC tumour necrosis factor alpha (TNF-alpha) from human blood by contacting
 CC the blood with a sequence of the invention, a method for stimulating the
 CC proliferation or differentiation of chondrocyte cells by contacting the
 CC cells with a PRO polypeptide and a method for detecting the presence of a
 CC tumour in a mammal. The polypeptides and polynucleotides are useful for
 CC the manufacture of a medicament for diagnosing or treating a tumour in a
 CC mammal. Sequences ABU85578-ABU85882 represent human PRO polypeptides of
 CC the invention. Note: The sequence data for this patent is also available
 CC in electronic format from USPTO at seqdata.uspto.gov/sequence.html

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

 XX New trap system for detecting protein interactions - comprises a reporter
 PT gene linked to a DNA-binding-protein recognition site and fusion proteins
 PT to test for interactions.
 PT
 XX
 XX Claim 73; Page 52; 89pp; English.
 PS
 XX Aptamers AAW32116-W32132 have been isolated from a peptide library and
 CC are used in a novel interaction trap method for detecting protein
 CC interactions and isolating novel proteins. The method involves a host
 CC cell containing a reporter gene operably linked to a DNA-binding-protein
 CC (DBP) recognition site, a fusion gene capable of expressing a fusion
 CC protein which is able to specifically bind to the DBP recognition site
 CC and a second fusion gene which expresses a second fusion protein which is
 CC conformationally constrained and bonded to a gene activating moiety.
 CC Measuring expression of the reporter gene gives a measure of the
 CC interaction between P1 and P2. This method can be used to identify
 CC agonists or antagonists for use as therapeutic molecules or for the
 CC design of simple molecule mimetics. The method is specifically used to
 CC detect an interacting protein in a population of proteins or to identify
 CC a candidate interactior. Using conformationally constrained proteins can
 CC provide for tertiary structural analysis and can also protect proteins
 CC from cellular degradation and/or increase the protein's solubility.
 CC and/or otherwise alter the capacity of the candidate interactor to
 CC interact

 XX Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide,
 PT useful as molecular targets for diagnostics, prophylaxis and treatment of
 PT pathological conditions resulting from bacterial infection.
 PT
 XX Disclosure; SEQ ID NO 31470; 455pp; English.
 PS
 XX The invention relates to Pseudomonas aeruginosa polypeptides and the
 CC polynucleotides encoding them. The sequences are useful in diagnosis and

CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biochip technology. Sequences AB067826-
CC AB084396 represent P. aeruginosa polypeptides of the invention. Note: The
CC sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html

XX Process for specifically modulating the properties of an intracellular
PT target molecule used for the treatment of various disorders.

XX Example 1; Fig 1; 33pp; English.

XX The present invention relates to a process for specifically modulating
CC the properties of an intracellular target molecule T, and/or of a
CC cellular component C which interacts directly or indirectly in a cell
CC with the target. The process involves the introduction into the cell of a
CC chimeric molecule known as a targeted effector, comprising a recognition
CC moiety capable of recognising T and an effector moiety. The chimeric
CC protein or nucleic acid can be used in the preparation of a medicament
CC for the treatment of microbial infections, immunological disorders,

CC neurological disorders, metabolic disorders, psychiatric disorders,
CC myopathies, genetic disorders, cancer, cardiovascular disorders and
CC dental disorders. The present sequence is a known anti-Cdk2 aptamer used
CC in the exemplification of the invention

XX N-PSDB; AAF32717.

XX Isolated nucleic acid molecule encoding a human secreted protein is used
PT in preventing, treating or ameliorating a medical condition.

XX Claim 11; Page 520-521; 593pp; English.

XX The polynucleotide sequences given in AAF32699 to AAF32747 encode the
CC human secreted proteins given in AAB64422 to AAB64470. AAB64471 to
CC AAB64548 represent human secreted polypeptide sequences and proteins
CC homologous to them, which are given in the exemplification of the present
CC invention. Human secreted proteins have activities based on the tissues
CC and cells the genes are expressed in. Examples of activities include:
CC antiarthritic; immunosuppressive; antirheumatic; antiproliferative;
CC cytostatic; cardiant; vasotropic; cerebroprotective; nontropic;
CC neuroprotective; antibacterial; virucide; fungicide; and
CC ophthalmological. The polynucleotides and polypeptides can be used to
CC prevent, treat or ameliorate a medical condition in e.g. humans, mice,
CC rabbits, goats, horses, cats, dogs, chickens or sheep. They are also used
CC in diagnosing a pathological condition or susceptibility to a
CC pathological condition. Disorders which are diagnosed or treated include
CC autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative

CC disorders e.g. neoplasms of the breast or liver, cardiovascular disorders
CC e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia,
CC angiogenesis, nervous system disorders e.g. Alzheimer's disease,
CC infections caused by bacteria, viruses and fungi and ocular disorders
CC e.g. corneal infection. The polypeptides can also be used to aid wound
CC healing and epithelial cell proliferation, to prevent skin aging due to
CC sunburn, to maintain organs before transplantation, for supporting cell
CC culture of primary tissues, to regenerate tissues and in chemotaxis. The
CC polypeptides can also be used as a food additive or preservative to
CC increase or decrease storage capabilities. AAF32690 to AAF32699 and
CC AAB64421 represent sequences used in the exemplification of the present
XX invention

XX Selecting target and target binder pairs for preparing a composition for
PT treating cancer by mixing in a reaction vessel phase expressing
PT biological targets and phase expressing target binders.

XX Claim 26; SEQ ID NO 115; 172pp; English.

XX The invention relates to a novel method of selecting target and target
CC binder pairs comprising mixing in a reaction vessel phase expressing
CC biological targets and phase expressing target binders, each having
CC distinguishable selection markers and selecting target and target binder
CC pairs based on the selection markers. The molecules of the invention
CC demonstrate cytostatic activity whilst the method may be useful for
CC selecting target and target binder pairs for preparing a composition for
CC treating cancer. Furthermore, the method may be utilised during gene
CC therapy procedures. The current sequence is that of the cancer-related
CC DGI-2-binder peptide of the invention.

XX Human secreted proteins and the nucleic acids that encode them, useful in
PT gene therapy protocols and recombinant nucleic acid based procedures.

XX Disclosure; Page 377; 410pp; English.

XX The invention relates to the isolation of genes AAC59335-C59382 encoding
CC the human secreted proteins AAB33844-B33891. The sequence is a search
CC result from a BLASTX homology search. The genes and proteins are useful
CC for preventing, ameliorating or treating medical conditions, e.g. by
CC protein or gene therapy. The genes are isolated from a range of human
CC tissues disclosed in the specification. The nucleic acids, proteins,
CC antibodies and (ant)agonists are useful in the diagnosis, treatment and
CC prevention of: (a) cancer, e.g. breast and ovarian cancer, and other
CC cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal
CC tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's
CC disease, allergies, diabetes mellitus, Crohn's disease, multiple sclerosis,
CC thyroiditis, arthritis and ulcerative colitis; (c) cardiovascular disorders
CC such as myocardial ischaemia; (d) wound healing; and (f) infectious diseases
CC such as viral, bacterial, fungal and parasitic infections

PT useful for preventing, diagnosing and/or treating nervous system cancers
PT and metastases.
XX
XX Claim 11; SEQ ID NO 4646; 1701pp + Sequence Listing; English.
XX
XX The invention relates to novel genes (ABA11004-ABA21534) and proteins
XX (ABB14678-ABB18001) useful for preventing, treating or ameliorating
XX medical conditions e.g. by protein or gene therapy. The genes are
XX isolated from a range of human tissues disclosed in the specification.
XX The nucleic acids, proteins, antibodies and (ant)agonists are useful in
XX the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and
XX ovarian cancer and other cancers of the adrenal gland, bone, bone marrow,
XX breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune
XX disorders e.g. Addison's disease, allergies, autoimmune haemolytic
XX anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease,
XX multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c)
XX cardiovascular disorders such as myocardial ischaemias; and (f)
XX ; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
XX infectious diseases such as viral, bacterial, fungal and parasitic
XX infections. Note: The sequence data for this patent did not form part of
XX the printed specification, but was obtained in electronic format directly
XX from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX New benzodiazepine and benzothiazepine derivatives, useful for treating
PT or preventing viral infection, contain peptides that include an annexin-
PT binding epitope.
XX
XX Example 5; Page 29; 60pp; English.
XX
XX This sequence represents a fragment of the hepatitis B virus surface
XX antigen F amino acid sequence. The antigen sequence is used to determine
XX the best sequence to use as a source of peptides for the composition of
XX the invention. The invention relates to benzodiazepine derivatives
XX derivatised with at least one peptide containing an annexin binding
XX epitope of an annexin binding protein (see AAY85082-Y85115) or its
XX fragment. Annexins are calcium dependent phospholipid binding proteins.
XX 1,4-benzodiazepines and 1,4-benzothiazepines can bind to annexin V, as
XX can the hepatitis B small surface antigen. The compositions of the
XX invention bind to cell surface annexins, and inhibit the binding and
XX entry of viruses to the cell. The benzodiazepine derivatives and some
XX related known compounds, are used to treat or prevent diseases involving
XX protein interactions with annexins, particularly viral infections and
XX specifically hepatitis B and/or D, cytomegalovirus or influenza or to
XX screen for compounds that block binding between annexins and their
XX interacting proteins. (Updated on 05-AUG-2003 to correct OS field.)

XX New isolated polynucleotide and encoded polypeptides, useful in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits and to assess
XX biodiversity.
XX Claim 20; SEQ ID NO 43911; 103pp; English.
XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
XX sequences. (I) is useful as hybridisation probes, polymerase chain
XX reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
XX and in recombinant production of (II). The polynucleotides are also used
XX in diagnostics as expressed sequence tags for identifying expressed
XX genes. (I) is useful in gene therapy techniques to restore normal
XX activity of (II) or to treat disease states involving (II). (II) is
XX useful for generating antibodies against it, detecting or quantitating a
XX polypeptide in tissue, as molecular weight markers and as a food
XX supplement. (II) and its binding partners are useful in medical imaging
XX of sites expressing (II). (I) and (II) are useful for treating disorders
XX involving aberrant protein expression or biological activities. The
XX polypeptide and polynucleotide sequences have applications in
XX diagnostics, forensics, gene mapping, identification of mutations
XX responsible for genetic disorders or other traits to assess biodiversity
XX and to produce other types of data and products dependent on DNA and
XX amino acid sequences. ABG0010-ABG30377 represent novel human diagnostic
XX amino acid sequences of the invention. Note: The sequence data for this
XX patent did not appear in the printed specification, but was obtained in
XX electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

XX Propionibacterium acnes polypeptides and nucleic acids useful for
XX vaccinating against and diagnosing infections, especially useful for
XX treating acne vulgaris.
XX Example 1; SEQ ID NO 19756; 1069pp; English.
XX
XX Sequences AAU9105-AAU68017 represent Propionibacterium acnes immunogenic
XX polypeptides. The proteins and their associated DNA sequences are used in
XX the treatment, prevention and diagnosis of medical conditions caused by
XX P. acnes. The disorders include SAPHO syndrome (synovitis, acne,
XX pustulosis, hypertosis and osteomyelitis), uveitis and endophthalmitis.
XX P. acnes is also involved in infections of bone, joints and the central
XX nervous system, however it is particularly involved in the inflammatory
XX lesions associated with acne vulgaris. A method for detecting the
XX presence or absence of P. acnes in a patient comprises contacting a
XX sample with a binding agent that binds to the proteins of the invention
XX and determining the amount of bound protein in the sample. The
XX polypeptides may be used as antigens in the production of antibodies
XX specific for P. acnes proteins. These antibodies can be used to
XX downregulate expression and activity of P. acnes polypeptides and
XX therefore treat P. acnes infections. The antibodies may also be used as
XX diagnostic agents for determining P. acnes presence, for example, by
XX enzyme linked immunosorbent assay (ELISA). Note: The sequence data for
XX this patent did not form part of the printed specification, but was
XX obtained in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences

 PT polypeptide, useful for diagnosing, preventing or treating acne vulgaris,
 PT or for stimulating an immune response specific for a P. acnes protein.
 XX
 PS Example 1; SEQ ID NO 19756; 1481pp; English.
 XX
 CC The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
 CC encoding a Propionibacterium acnes protein. The invention also relates to
 CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
 CC immunogenic fragments of P. acnes polypeptides. The invention
 CC additionally encompasses expression vectors and host cells comprising a
 CC polynucleotide of the invention; antibodies against polypeptides of the
 CC invention; fusion proteins comprising a polypeptide of the invention; a
 CC method for stimulating an immune response specific for a P. acnes
 CC polypeptide and an isolated T cell population comprising T cells prepared
 CC via this method; a vaccine composition (comprising P. acnes polypeptides,
 CC polynucleotides, antibodies, fusion proteins, T cell populations, or
 CC antigen-presenting cells that express the polypeptide); a method and kit
 CC for detecting or determining the presence or absence of P. acnes in a
 CC patient; and a method for inhibiting the development of P. acnes in a
 CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
 CC proteins, T cell populations or antigen-presenting cells that express the
 CC polypeptides are useful for diagnosing, preventing or treating acne
 CC vulgaris, or for stimulating an immune response specific for a P. acnes
 CC protein. The polynucleotides can also be used as probes or primers for
 CC nucleic acid hybridisation. The vaccine composition is useful for the
 CC stimulation of an immune response against P. acnes, or for treating acne,
 CC and the kit is useful for performing a diagnostic assay. The present
 CC sequence represents a polypeptide predicted to be encoded by an ORF (open
 CC reading frame) contained within the P. acnes polynucleotides of the
 CC invention. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

 PS Claim 7; SEQ ID NO 29314; 1481pp; English.
 XX
 CC The invention relates to an isolated polynucleotide (ACF64435-ACF64733)
 CC encoding a Propionibacterium acnes protein. The invention also relates to
 CC polypeptides encoded by the polynucleotides (ABM35624-ABM64536) and to
 CC immunogenic fragments of P. acnes polypeptides. The invention
 CC additionally encompasses expression vectors and host cells comprising a
 CC polynucleotide of the invention; antibodies against polypeptides of the
 CC invention; fusion proteins comprising a polypeptide of the invention; a
 CC method for stimulating an immune response specific for a P. acnes
 CC polypeptide and an isolated T cell population comprising T cells prepared
 CC via this method; a vaccine composition (comprising P. acnes polypeptides,
 CC polynucleotides, antibodies, fusion proteins, T cell populations, or
 CC antigen-presenting cells that express the polypeptide); a method and kit
 CC for detecting or determining the presence or absence of P. acnes in a
 CC patient; and a method for inhibiting the development of P. acnes in a
 CC patient. The P. acnes polypeptides, polynucleotides, antibodies, fusion
 CC proteins, T cell populations or antigen-presenting cells that express the
 CC polypeptides are useful for diagnosing, preventing or treating acne
 CC vulgaris, or for stimulating an immune response specific for a P. acnes
 CC protein. The polynucleotides can also be used as probes or primers for
 CC nucleic acid hybridisation. The vaccine composition is useful for the
 CC stimulation of an immune response against P. acnes, or for treating acne,
 CC and the kit is useful for performing a diagnostic assay. The present
 CC sequence represents a polypeptide predicted to be encoded by an ORF (open
 CC reading frame) contained within the P. acnes polynucleotides of the
 CC invention. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

XX
XX Human proteins and DNA encoding sequences useful for preventing, treating
PT or ameliorating a medical condition in a mammalian subject e.g. arthritis
PT and cancer.
XX
XX Claim 20; Page 144; 1963pp; English.
XX
XX Sequences ABB10981-ABB12330 represent 1350 novel human polypeptides, and
CC sequences ABA08225-ABA09574 represent nucleic acids encoding them. The
CC invention also relates to vectors and recombinant host cells comprising a
CC nucleotide of the invention, methods of producing the novel polypeptides,
CC antibodies against the polypeptides, methods of detecting the nucleotides
CC or polypeptides in a sample, and methods of identifying compounds which
CC bind to polypeptides of the invention. Although novel, many of the
CC polypeptides of the invention have homology to known proteins, thereby
CC giving an insight into their probable biological activities, and hence
CC potential therapeutic applications. The polypeptides of the invention may
CC have various activities, including cytokine, cell proliferation or cell
CC differentiation activities; stem cell growth factor activity;
CC haematopoiesis regulatory activity; tissue growth activity;
CC immunomodulatory activity; activin- or inhibin-related activities;
CC chemotactic or chemokinetic activities; haemostatic, thrombotic or
CC thrombolytic activities; receptor or ligand activities; or may be
CC involved in oncogenesis, cancer cell proliferation or metastasis.
CC Depending on their biological activities, polypeptides and nucleotides of
CC the invention are useful for preventing, treating or ameliorating medical
CC conditions, e.g., by protein or gene therapy. Such conditions include
CC cancers, haematopoietic disorders (e.g., myeloid or lymphoid cell
CC disorders), chronic inflammatory conditions (e.g., asthma or arthritis),
CC proliferative retinopathy, atherosclerosis, coronary heart disease,
CC arterial ischaemia, bone disorders (e.g., osteoporosis), and abnormal
CC vascular growth. Polypeptides involved with tissue regeneration and
CC repair (or nucleic acids encoding them) may be used to promote wound
CC healing (e.g., of burns, incisions and ulcers), while those with
CC immunomodulatory activities may be used in the treatment of viral,
CC bacterial and fungal infections in addition to immune disorders.
CC Polypeptides with growth factor activity may be used in cell cultures to
CC promote cell growth. For example, such polypeptides may be used to
CC manipulate stem cells in culture to give rise to neuroepithelial cells
CC that can be used to augment or replace cells damaged by illness,
CC autoimmune disease or accidental damage. The polypeptides and nucleotides
CC may also be used in the diagnosis of the above conditions, and in drug
CC screening techniques. The present sequence represents a novel human
CC polypeptide of the invention

XX
XX Recombinant multivalent antigenic polypeptide produced by recombining
PT nucleic acid sequences and screening, used in vaccines against e.g.
PT infections and cancer.
XX Example 14; Fig 17; 153pp; English.
PS
XX This sequence is the woodchuck hepatitis virus surface antigen PreS2-S
CC region. This sequence was used to create a recombinant antigen library.
CC The library comprises recombinant nucleic acids encoding antigenic
CC polypeptides and is produced by recombination of at least two forms of
CC nucleic acid, differing by at least two nucleotides, encoding a disease-

CC related antigenic polypeptide. The library can be used to produce a
 CC recombinant multivalent antigenic polypeptides of the invention, that
 CC contains at least two antigenic determinants (AD) from different
 CC polypeptides. The multivalent antigenic polypeptides are used in vaccines
 CC to induce a protective or therapeutic response to a wide variety of
 CC infectious agents (bacteria, viruses, parasites, including Plasmodium
 CC falciparum); allergens; asthma; autoimmune disease (e.g. rheumatoid
 CC arthritis, diabetes, multiple sclerosis); other inflammatory conditions
 CC and cancer, also, where directed against sperm antigens, they can be used
 CC for contraception. The multivalent peptides can be evolved to induce an
 CC optimised immune response against a wide variety of antigens,
 CC particularly a broad spectrum response to many different strains of a
 CC pathogen, including strains that are likely to appear in the future.
 CC (Updated on 17-OCT-2003 to standardise OS field)

New isolated nucleic acid encoding a protein for diagnosing, preventing, treating or ameliorating medical conditions and used as food additives or preservatives.
Claim 9; SEQ ID NO 621; 837pp; English.
The invention describes an isolated nucleic acid molecule (I) encoding a novel central nervous system protein. (I) and polypeptides (III) encoded by (I), are used to treat a medical conditions and in diagnosis of a pathological condition. Disorders which are diagnosed or treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. cerebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease and amyotrophic lateral sclerosis, infections caused by bacteria, viruses e.g. Acquired immunodeficiency virus (AIDS) and fungi, ocular disorders e.g. corneal infection, gastrointestinal disorders e.g. dysphagia, adenocarcinomas and irritable bowel syndrome, reproductive system disorders e.g. testicular feminisation, endocrine disorders e.g. diabetes and pituitary dwarfism, cancers and disorders at the cellular level e.g.

CC leukaemia, disorders involving neovascularisation e.g. malignancies, respiratory disorders e.g. nonallergic rhinitis, renal disorders e.g. acute kidney failure and blood related disorders e.g. myocardial infarction. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. The polypeptides can also be used as a food additive or preservative to increase or decrease storage capabilities, fat content, lipid, protein, Query Match 30.0%; Score 6; DB 4; Length 305;

XX New method for inhibiting the replication of hepadnaviruses - comprises
 PT introducing a mutant polypeptide with a mutated core protein or
 PT corresponding nucleic acid, for treating, e.g. hepatitis B.

XX Disclosure; Page 40-42; 83pp; English.

XX Plasmid pcn4 carries an insert (AAT49596) coding for a fusion (AAW09046)
 CC between the woodchuck hepatitis virus (WHV) core protein amino acids 1-
 CC 177 with amino acid 47 of the WHV small surface protein. Cotransfection
 CC of human hepatoma HuH-7 cells with wild- type WHV pcn482 and mutant core
 CC construct pcn4 resulted in an 85% inhibition of wild-type viral DNA
 CC replication. The pcn4-encoded dominant negative core polypeptide was not
 CC toxic to HCC cells. The dominant negative effects on viral replication
 CC are consistent over a range of hepadnavirus species and can be utilised
 CC in the treatment of viral infection. (Updated on 17-OCT-2003 to
 CC standardise OS field)

XX Database global search for G protein-coupled receptors, proteins and
 PT encoded genes for studying in vivo signal transduction mechanism and
 PT identifying targets for drug development.

XX Claim 10; SEQ ID NO 4; 97pp + Sequence Listing; Japanese.

XX The invention relates to a method for screening G protein-coupled
 CC receptor (GPCR) genes (ABZ42870-ABZ43216) and/or GPCR proteins (ABP95596-
 CC ABP95942) by extracting open-reading frames containing 6-8 transmembrane
 CC domains with 250-1000 amino acid residues to give a gene homologous with
 CC a known GPCR gene. The receptor proteins and encoded genes are useful for
 CC studying in vivo signal transduction mechanism and identifying targets
 CC for drug development e.g. based on olfactory and gustatory receptors in
 CC form of agonists and antagonists by screening intrinsic and extrinsic
 CC ligands as bitter taste inhibitors, taste enhancers and fragrance
 CC improvers. Note: The sequence data for this patent did not form part of
 CC the printed specification, but was obtained in electronic format directly
 CC from WIPO at ftp.wipo.int/pub/published_pct_sequences

 XX PT New nucleic acid encoding a Klebsiella pneumoniae polypeptide, useful for
 PT preparing a vaccine composition against Klebsiella pneumoniae.

XX PS Disclosure; SEQ ID NO 7940; 932pp; English.
 XX CC The invention describes a new isolated nucleic acid encoding a Klebsiella
 CC pneumoniae polypeptide. Also described are: a recombinant expression
 CC vector comprising the nucleic acid, operably linked to a transcription
 CC regulatory element; and a cell comprising the recombinant expression
 CC vector. The nucleic acid is useful for preparing a vaccine composition
 CC against Klebsiella pneumoniae. This is the amino acid sequence of a
 CC Klebsiella pneumoniae polypeptide of the invention

 XX PT New antisense nucleic acids, useful for identifying proteins or screening
 PT for homologous nucleic acids required for cellular proliferation to
 PT isolate candidate molecules for rational drug discovery programs.
 XX PS Claim 25; SEQ ID NO 47856; 1766pp; English.
 XX CC The invention relates to an isolated nucleic acid comprising any one of
 CC the 6213 antisense sequences given in the specification where expression
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:
 CC (1) a vector comprising a promoter operably linked to the nucleic acid
 CC encoding a polypeptide whose expression is inhibited by the antisense
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated
 CC polypeptide or its fragment whose expression is inhibited by the
 CC antisense nucleic acid; (4) an antibody capable of specifically binding
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular
 CC proliferation or the activity of a gene in an operon required for
 CC proliferation; (7) identifying a compound that influences the activity of

the gene product or that has an activity against a biological pathway
 required for proliferation, or that inhibits cellular proliferation; (8)
 identifying a gene required for cellular proliferation or the biological
 pathway in which a proliferation-required gene or its gene product lies
 or a gene on which the test compound that inhibits proliferation of an
 organism acts; (9) manufacturing an antibiotic; (10) profiling a
 compound's activity; (11) a culture comprising strains in which the gene
 product is overexpressed or underexpressed; (12) determining the extent
 to which each of the strains is present in a culture or collection of
 strains; or (13) identifying the target of a compound that inhibits the
 proliferation of an organism. The antisense nucleic acids are useful for
 identifying proteins or screening for homologous nucleic acids required
 for cellular proliferation to isolate candidate molecules for rational
 drug discovery programs, or for screening homologous nucleic acids
 required for proliferation in cells other than *S. aureus*, *S. typhimurium*,
K. pneumoniae or *P. aeruginosa*. The present sequence is encoded by one of
 the target prokaryotic essential genes. Note: the sequence data for this
 patent did not form part of the printed specification, but was obtained
 in electronic format directly from WIPO at
 ftp.wipo.int/pub/published_pct_sequences

 XX New isolated NOVX polypeptides useful for treating, preventing and
 PT diagnosing pathological conditions with NOVX-associated disorders, such
 PT as cancer, obesity, diabetes and inflammatory or CNS diseases.
 XX Claim 1; SEQ ID NO 20; 418pp; English.
 XX The invention relates to a new isolated polypeptide (designated NOVX)
 CC comprising one of 141 fully defined sequences, their mature forms, a
 CC protein comprising one or more conservative substitutions or having at
 CC least 95% identity to one of the 141 proteins. Also included are a
 CC composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit
 CC comprising the composition of NOVX in one or more containers, an isolated
 CC nucleic acid molecule encoding a NOVX protein, producing NOVX (comprising
 CC culturing a cell under conditions that lead to expression of the
 CC polypeptide, where the cell comprises a vector comprising NOVX NA),
 CC identifying an agent that binds to NOVX, identifying a potential
 CC therapeutic agent for use in the treatment of a pathology that is related
 CC to aberrant expression or physiological interactions of NOVX, screening
 CC for a modulator of activity of or latency or predisposition to a
 CC pathology associated with NOVX, modulating the activity of NOVX, treating
 CC or preventing a pathology associated with NOVX, treating a pathological
 CC state in a mammal, a vector comprising the NOVX nucleic acid molecule, a
 CC cell comprising the vector, an antibody that immunospecifically binds to
 CC NOVX, determining the presence or amount of NOVX or the nucleic acid
 CC molecule in a sample, and determining the presence of or predisposition
 CC to a disease associated with altered levels of expression of NOVX or the
 CC nucleic acid molecule in a first mammalian subject. The methods and
 CC compositions of the present invention are useful for the diagnosis and
 CC treatment of disorders associated with aberrant expression or activity of
 CC the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine,
 CC CNS and inflammatory disorders. They can also be used in various
 CC detection and screening assays, chromosome mapping, tissue typing, gene
 CC therapy and predictive medicine. The present sequence represents a NOVX
 CC protein.

 PT polynucleotide sequences that are phylogenetically different from HBV
 PT genotype A-F molecules, useful for HBV diagnosis, prophylaxis and
 PT therapy.
 XX
 XX Example 3; Fig 6; 94pp; English.
 PS
 XX The invention relates to the complete nucleic acid sequence of a new
 CC human hepatitis B virus (HBV) genotype, provisionally named genotype G.
 CC This genotype was found with a high prevalence in patients chronically
 CC infected with HBV and residing in Europe and the USA. The invention
 CC relates to a fully defined sequence of 3248 nucleotides as given in
 CC specification, a sequence with 92% identity to the given sequence, or
 CC sequence that is degenerate to the mentioned sequences. These
 CC polynucleotides are useful for HBV genotyping. The proteins encoded by
 CC the polynucleotides are useful for detecting antibodies in a biological
 CC sample. Ligands that bind to the proteins and antibodies directed against
 CC the proteins are useful for detecting the proteins and for detecting
 CC HBeAg and HBeAg (precure precursor proteins). They are also useful for
 CC preparing a vaccine or medicament for treating HBV infections. The
 CC present sequence is provided in an amino acid sequence alignment of the
 CC preS1, preS2 and HBeAg open reading frame of the different HBV genotypes

 PT New MOLX polypeptide, nucleic acid or MOLX-specific antibody, useful for
 PT preparing a composition for treating or preventing a MOLX-associated
 PT disorder, e.g., cardiomyopathy, diabetes or atherosclerosis.
 XX
 XX Claim 1; SEQ ID NO 118; 371pp; English.
 XX
 CC This invention relates to novel human nucleic acid sequences which encode
 CC novel molecule (MOL) proteins numbered MOLI-23, referred to generally in
 CC the specification as MOLX. Compounds which modulate the function of the
 CC MOLX proteins of the invention, MOLX agonists or antagonists, may have
 CC cardiant, antidiabetic or antiarteriosclerotic activities. In addition,
 CC the DNA and protein sequences disclosed may prove useful for gene
 CC therapy. The protein, nucleic acid or antibody is useful for preparing a
 CC composition for treating or preventing a MOLX-associated disorder, for
 CC example cardiomyopathy, diabetes or atherosclerosis. The present sequence
 CC is the amino acid sequence of a MOL protein of the invention.

 XX
 PT New isolated NOVX polypeptides useful for treating, preventing and
 PT diagnosing pathological conditions with NOVX-associated disorders, such
 PT as cancer, obesity, diabetes and inflammatory or CNS diseases.
 XX
 XX Claim 1; SEQ ID NO 14; 418pp; English.
 PS
 CC The invention relates to a new isolated polypeptide (designated NOVX)
 CC comprising one of 141 fully defined sequences, their mature forms, a
 CC protein comprising one or more conservative substitutions or having at
 CC least 95% identity to one of the 141 proteins. Also included are a
 CC composition comprising NOVX (or a NOVX nucleic acid molecule (NA)), a kit
 CC comprising the composition of NOVX in one or more containers, an isolated
 CC nucleic acid molecule encoding a NOVX protein, producing NOVX (comprising
 CC culturing a cell under conditions that lead to expression of the
 CC polypeptide, where the cell comprises a vector comprising NOVX NA),
 CC identifying an agent that binds to NOVX, identifying a potential
 CC therapeutic agent for use in the treatment of a pathology that is related
 CC to aberrant expression or physiological interactions of NOVX, screening
 CC for a modulator of activity of or latency or predisposition to a
 CC pathology associated with NOVX, modulating the activity of NOVX, treating
 CC or preventing a pathology associated with NOVX, treating a pathological
 CC state in a mammal, a vector comprising the NOVX nucleic acid molecule, a
 CC cell comprising the vector, an antibody that immunospecifically binds to
 CC NOVX, determining the presence or amount of NOVX or the nucleic acid
 CC molecule in a sample, and determining the presence of or predisposition
 CC to a disease associated with altered levels of expression of NOVX or the
 CC nucleic acid molecule in a first mammalian subject. The methods and
 CC compositions of the present invention are useful for the diagnosis and
 CC treatment of disorders associated with aberrant expression or activity of
 CC the NOVX polypeptide, such as cancer, diabetes, obesity, and endocrine,
 CC CNS and inflammatory disorders. They can also be used in various
 CC detection and screening assays, chromosome mapping, tissue typing, gene
 CC therapy and predictive medicine. The present sequence represents a NOVX
 CC protein.

 PT diagnostics, forensics, gene mapping, identification of mutations
 PT responsible for genetic disorders or other traits and to assess
 PT biodiversity.

XX Claim 20; SEQ ID NO 44574; 103pp; English.

XX The invention relates to isolated polynucleotide (I) and polypeptide (II)
 CC sequences. (I) is useful as hybridisation probes, polymerase chain
 CC reaction (PCR) primers, oligomers, and for chromosome and gene mapping,
 CC and in recombinant production of (II). The polynucleotides are also used
 CC in diagnostics as expressed sequence tags for identifying expressed
 CC genes. (I) is useful in gene therapy techniques to restore normal
 CC activity of (II) or to treat disease states involving (II). (II) is
 CC useful for generating antibodies against it, detecting or quantitating a
 CC polypeptide in tissue, as molecular weight markers and as a food
 CC supplement. (II) and its binding partners are useful in medical imaging
 CC of sites expressing (II). (I) and (II) are useful for treating disorders
 CC involving aberrant protein expression or biological activity. The
 CC polypeptide and polynucleotide sequences have application in
 CC diagnostics, forensics, gene mapping, identification of mutations

CC responsible for genetic disorders or other traits to assess biodiversity
 CC and to produce other types of data and products dependent on DNA and
 CC amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic
 CC amino acid sequences of the invention. Note: The sequence data for this
 CC patent did not appear in the printed specification, but was obtained in
 CC electronic format directly from WIPO at

XX Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide,
 PT useful as molecular targets for diagnostics, prophylaxis and treatment of
 PT pathological conditions resulting from bacterial infection.

XX Disclosure; SEQ ID NO 22078; 455pp; English.

XX The invention relates to Pseudomonas aeruginosa polypeptides and the
 CC polynucleotides encoding them. The sequences are useful in diagnosis and
 CC therapy of pathological conditions, as molecular targets for diagnostics,
 CC prophylaxis and treatment of pathological conditions resulting from a
 CC bacterial infection, for evaluating a compound, such as a polypeptide,
 CC for the ability to bind a P. aeruginosa nucleic acid, as components of
 CC effective antibacterial targets, as targets for antibacterial drugs,
 CC including anti-P. aeruginosa drugs, as templates for recombinant
 CC production of P. aeruginosa-derived peptides or polypeptides, as target
 CC components for diagnosis and/or treatment of P. aeruginosa-caused
 CC infection, and in detection of P. aeruginosa sequences or other sequences
 CC of Pseudomonas species using biochip technology. Sequences AB067826-
 CC AB084396 represent P. aeruginosa polypeptides of the invention. Note: The
 CC sequence data for this patent did not form part of the printed
 CC specification but was obtained in electronic format from USPTO at
 CC seqdata.uspto.gov/sequence.html

XX Identifying plant target proteins for herbicidally active compounds,
PT comprising aligning and comparing nucleic acid or amino acid sequences
PT from plant with nucleic acid or amino acid sequences from non-plant
PT organisms.

XX Claim 5; SEQ ID NO 2732; 261pp + Sequence Listing; English.

XX The invention relates to identifying target proteins (ABB90790-ABB94016)
CC for herbicidally active compounds, comprising aligning and comparing
CC nucleic acid or amino acid sequences from plant with nucleic acid or
CC amino acid sequences from non-plant organisms using suitable search
CC parameters, where plant sequences having an E-value greater by a factor
CC of 3 than the E-value of most similar non-plant sequences are selected.
CC The polypeptides or nucleic acids encoding them are useful for
CC identifying modulators. The identified modulators are useful as
CC herbicides

XX Making transformed plants that selectively increase gamma-aminobutyric
PT acid production, by incorporating a DNA construct with a polynucleotide
PT encoding a plant glutamic acid decarboxylase enzyme into plant's genome.
XX
XX Claim 17; Page 53; 63pp; English.

XX The present invention relates to a method of producing a transformed
CC plant that selectively increases production of gamma-aminobutyric acid
CC (GABA) in response to a signal, by incorporating into the plant's genome
CC a DNA construct with a non-constitutive promoter operably linked to a
CC polynucleotide encoding a functional plant glutamic acid decarboxylase
CC (GAD), to provide a transformed plant that expresses the GAD coding
CC sequence in response to a signal. Plants of this type have an enhanced
CC ability to tolerate environmental or other stresses. The present sequence
CC is the A. thaliana GAD1 protein

CC enzyme e.g., microbial monoamine oxidase (MAO), preferably Aspergillus
CC niger monoamine oxidase or its variant. This method is also useful for
CC increasing the enantioselectivity of an amine oxidase enzyme. The
CC enantioselective amine oxidase enzyme of the invention is useful in
CC deracemization of amines. This sequence represents the wild-type
CC Aspergillus niger monoamine oxidase protein of the invention.

PT Novel isolated nucleic acid encoding Pseudomonas aeruginosa polypeptide,
PT useful as molecular targets for diagnostics, prophylaxis and treatment of
PT pathological conditions resulting from bacterial infection.
XX
PS Disclosure; SEQ ID NO 24635; 455pp; English.
XX
CC The invention relates to Pseudomonas aeruginosa polypeptides and the
CC polynucleotides encoding them. The sequences are useful in diagnosis and
CC therapy of pathological conditions, as molecular targets for diagnostics,
CC prophylaxis and treatment of pathological conditions resulting from a
CC bacterial infection, for evaluating a compound, such as a polypeptide,
CC for the ability to bind a P. aeruginosa nucleic acid, as components of
CC effective antibacterial targets, as targets for antibacterial drugs,
CC including anti-P. aeruginosa drugs, as templates for recombinant
CC production of P. aeruginosa-derived peptides or polypeptides, as target
CC components for diagnosis and/or treatment of P. aeruginosa-caused
CC infection, and in detection of P. aeruginosa sequences or other sequences
CC of Pseudomonas species using biotech technology. Sequences ABO67826-
CC ABO84396 represent P. aeruginosa polypeptides of the invention. Note: The
CC sequence data for this patent did not form part of the printed
CC specification but was obtained in electronic format from USPTO at
CC seqdata.uspto.gov/sequence.html

XX New polynucleotides and polypeptides for predicting the activity of
PT compounds that interact with protein tyrosine kinases and/or protein
PT tyrosine kinase pathways.

XX Claim 10; SEQ ID NO 339; 139pp; English.

XX The present invention describes a predictor set comprising a plurality of
CC polynucleotides or polypeptides whose expression pattern is predictive of
CC the response of cells to treatment with a compound that modulates protein
CC tyrosine kinase activity or members of the protein tyrosine kinase
CC pathway. Also described: (1) predicting whether a compound is capable of
CC modulating the activity of cells, comprising obtaining a sample of cells,
CC determining whether the cells express a plurality of markers, and
CC correlating the expression of the markers to the compound's ability to
CC modulate the activity of the cells; (2) a plurality of cell lines for
CC identifying polynucleotides and polypeptides whose expression levels
CC correlate with compound sensitivity or resistance of cells associated
CC with a disease state; and (3) identifying polynucleotides and
CC polypeptides that predict compound sensitivity or resistance of cells
CC associated with a disease state, comprising subjecting the plurality of
CC cell lines to one or more compounds, analysing the expression pattern of
CC a microarray of polynucleotides or polypeptides, and selecting
CC polynucleotides or polypeptides that predict the sensitivity or
CC resistance of cells associated with a disease state by using the
CC expression pattern of the microarray. The polynucleotides and
CC polypeptides have cytostatic activities, and can be used in gene therapy.
CC The polynucleotides and polypeptides are useful in predicting the
CC activity of compounds that interact with protein tyrosine kinases and/or
CC protein tyrosine kinase pathways. These may be used in determining drug
CC sensitivity in patients to allow the development of individualized
CC genetic profiles which aid in treating diseases and disorders (e.g.
CC cancer) based on patient response at a molecular level. The present
CC sequence is used in the exemplification of the present invention.

 PS
 XX
 XX The invention relates to 40 human secreted proteins (AA94981-Y95020),
 CC and cDNA sequences encoding them (AA23423-A23462). The secreted proteins
 CC of the invention include those that are thought to be only partially
 CC secreted, i.e., transmembrane proteins. The proteins of the invention may
 CC exhibit one or more activities selected from the following: cytokine
 CC activity; cell proliferation; differentiation; immune modulation;
 CC haematopoiesis regulation; tissue growth activity; activin/inhibin
 CC activity; chemotactic/chemokinetic activity; haemostatic and thrombolytic
 CC activity; anti-inflammatory activity; and tumour inhibition activity. The
 CC proteins may be administered to patients as vaccines, and the nucleotides
 CC may be used as part of a gene therapy regime. Diseases or conditions that
 CC can be treated using the proteins or nucleotides of the invention include
 CC autoimmune diseases; genetic disorders; haemophilia; cardiovascular
 CC diseases; cancer; bacterial, fungal and viral infections, especially HIV;
 CC multiple sclerosis; rheumatoid arthritis; pulmonary inflammation;
 CC Guillain-Barre syndrome; insulin dependent diabetes mellitus; and
 CC allergic reactions such as asthma and anaemia. They may also be used for
 CC treating wounds, burns, ulcers, osteoporosis, osteoarthritis, periodontal
 CC diseases, Alzheimer's disease, Parkinson's disease, Huntington's disease
 CC and amyotrophic lateral sclerosis (ALS). Proteins with activin/inhibin
 CC activity may additionally be useful as contraceptives. Nucleic acid
 CC sequences of the invention may be used in chromosome mapping, and as a
 CC source of diagnostic primers and probes. The present sequence represents
 CC one of the 40 proteins of the invention

XX New mammalian DNA sequences encoding transmembrane, receptor or secreted
PT PRO polypeptides, useful for screening of potential peptide or small
PT molecule inhibitors of the relevant receptor/ligand interactions.
XX Claim 12; Fig 60; 773pp; English.
XX AAA37022 to AAA37144 encode the new isolated human transmembrane,
CC
```

CC receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The
CC transmembrane and receptor PRO proteins can be used for screening of
CC potential peptide or small molecule inhibitors of the relevant
CC receptor/ligand interactions. The polypeptides and nucleotide sequences
CC encoding them have various industrial applications, including uses as
CC pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR
CC primers and hybridisation probes used in the isolation of the PRO
CC polypeptides from the present invention

XX Secreted and transmembrane proteins and nucleic acids designated PRO,
PT useful as hybridization probes, in chromosome and gene mapping and gene
PT therapy.
XX
XX Claim 1; Fig 60; 787pp; English.
XX
CC The present invention relates to secreted and transmembrane proteins.
CC These proteins and the DNA encoding them may be used as hybridization
CC probes, in chromosome and gene mapping and in the generation of anti-
CC sense RNA and DNA. They may also be used to generate either
CC transgenic animals or knockout animals which are in turn useful for
CC development and screening of therapeutically useful reagents. The nucleic
CC acids may also be used in gene therapy

XX Novel nucleic acids encoding PRO polypeptides, used to diagnose the
PT presence of tumors, such as prostate and breast tumors, in mammals and to
PT screen for modulators of the compounds.
XX Claim 11; Fig 266; 774pp; English.
XX Sequences AU29024-AU29328 represent PRO polypeptides of the invention.
CC The PRO polypeptides and their associated nucleic acids can be used to
CC detect the presence of a tumour in a mammal by comparing the level of
CC expression of a PRO polypeptide in a test sample of cells from the animal
CC and a control sample of normal cells, whereby a higher level of
CC expression in the test sample indicates the presence of a tumour in the
CC mammal. Mammals include dogs, cats, cattle, horses, sheep, pigs, goats
CC and rabbits but are preferably human. The polypeptides can be used to
CC stimulate tumour necrosis factor (TNF) alpha release from human blood,
CC when contacted with it. A specific polypeptide can be used to stimulate
CC the proliferation or differentiation of chondrocyte cells. The PRO
CC proteins can be used to determine the presence of tumours and also
CC susceptibility to tumour development, particularly adrenal, lung, colon,
CC breast, prostate, rectal, cervical, or liver tumours, in mammalian
CC subjects. The oligonucleotide probes specific for the PRO nucleic acids
CC can be used for genetic analysis of individuals with genetic disorders

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
